

# Iowa State University

## Dairy Science Student Profile

**Name:** Sally Hamlett

**Hometown:** Aurora, Iowa

**High School:** Starmont Community School District

**Class Size:** 35

**Farm Name:** Starmont Holsteins

**Major:** Animal Science

**Minor:** Biology

**Why did you decide to attend ISU:** I decided to attend ISU because I really liked the campus set up, the friendly people and that it is one of the best agriculture school in Iowa. In addition, I felt that I would receive an excellent education by attending ISU.

**What has been your most memorable college experience?** My most memorable experience thus far at Iowa State was at the Iowa State Fair, at the I Milked A Cow booth for the Dairy Science Club at Iowa State University. It is my most memorable from seeing how people, young and old, reacted to milking a cow for the first time. It is a very satisfying feeling to help in small ways for someone, who has minimal agriculture experience, to learn where milk comes from.

**What has been your favorite course?** My favorite course thus far has been Animal Science 214 Lab. It has been my favorite course because of the hands-on opportunities in learning about animal physiology. My favorite part was the reproductive section because of how different species can be and still create a new being. In addition, the class added to my desire to become a Veterinarian.

**What are your future career goals?** My future goals are to attend Veterinary School and continue my education learning about animals and the many things associated with them. I look forward to advancing myself as a person as well as the information that I help uncover. Whether it is through research or out in the world. Also, I am sure that I will end up where I am needed as a veterinarian. Therefore, I look forward to my future and what is to come.
